III. READING COMPREHESION: (1,25 pts)

Plastic pollution is a serious problem around the world today. Plastic waste damages our environment and harms human health. It takes hundreds of years for plastic to break down, and it kills many ocean animals. Many countries are trying to find new things to use instead of plastic. These new products should be natural and safe for the Earth.

Rice straws are an excellent solution. They are environmentally friendly and completely safe for our health. These straws are made from rice flour and other natural ingredients like tapioca starch. The colors come from vegetables, flowers, and fruits - not from chemicals.

Rice straws are very strong. They can last between 4 to 10 hours in your drink without breaking or getting soft. They don't change the taste of your drink at all. After you finish drinking, you can actually eat the straw!

Rice straws can break down naturally and quickly, which means they don't create pollution. They are also completely safe for **marine life**. Rice straws are the perfect choice for anyone who cares about protecting our planet and staying healthy.

A. Decide if the statements from 19 to 21 are True (A) or False (B).

IV. READING COMPREHENSION: (1,25 pts)

Plastic pollution is a serious problem around the world today. Plastic waste damages our environment and harms human health. It takes hundreds of years for plastic to break down, and it kills many ocean animals. Many countries are trying to find new things to use instead of plastic. These new products should be natural and safe for the Earth.

Rice straws are an excellent solution. They are environmentally friendly and completely safe for our health. These straws are made from rice flour and other natural ingredients like tapioca starch. The colors come from vegetables, flowers, and fruits - not from chemicals.

Rice straws are very strong. They can last between 4 to 10 hours in your drink without breaking or getting soft. They don't change the taste of your drink at all. After you finish drinking, you can actually eat the straw!

Rice straws can break down naturally and quickly, which means they don't create pollution. They are also completely safe for **marine life**. Rice straws are the perfect choice for anyone who cares about protecting our planet and staying healthy.
