A rather surprising geographical feature of Antarctica is that a huge freshwater lake, one of the world's largest and deepest, lies hidden there under four kilometers of ice. Now known as Lake Vostok, this huge body of water is located under the ice block that comprises Antarctica. The lake is able to exist in **its** unfrozen state beneath this block of ice because its waters are warmed by geothermal heat from the earth's core. The thick glacier above Lake Vostok actually insulates it from the frigid temperatures on the surface. The lake was first discovered in the 1970s while a research team was **conducting** an aerial survey of the area. Radio waves from the survey equipment penetrated the ice and revealed a body of water of indeterminate size. It was not until much more recently that data collected by satellite made scientists aware of the tremendous size of the lake; the satellite-borne radar detected an extremely flat region where the ice remains level because it is floating on the water of the lake.

The discovery of such a huge freshwater lake trapped under Antarctica is of interest to the scientific community because of the potential that the lake contains ancient microbes that have survived for thousands of years, unaffected by factors such as nuclear fallout and elevated ultraviolet light that have affected organisms in more exposed areas. The downside of the discovery, however, lies in the difficulty of conducting research on the lake in such a harsh climate and in the problems associated with obtaining uncontaminated samples from the lake without actually exposing the lake to contamination. Scientists are looking for possible ways to accomplish this

Question 11: The word "**its**" in the passage refers to

- A. Survey's B. Water's C. The lake's D. Ice's

Question 12: It can be inferred from the passage that the ice would not be flat if.....

- A. the lake were not so big B. there were no lake underneath
C. Antarctica were not so cold D. radio waves were not used

Question 13: All of the following are true about the 1970 survey of Antarctica EXCEPT that it.....

- A. could not determine the lake's exact size
B. was conducted by air
C. was controlled by a satellite
D. made use of radio waves

Question 14: The word "**conducting**" in the passage is closest in meaning to.....

- A. providing with B. turning on C. carrying out D. going on

Question 15: Lake Vostok is potentially important to scientists because.....

- A. can be studied using radio waves
B. may contain uncontaminated microbes
C. may have elevated levels of ultraviolet light
D. has already been contaminated

Choose an option that best fits each gap in the following passage. (1.25m)
