TASK 2. Read the following text and circle the letter A, B, C, or D to indicate the correct option that best fits each other numbered blanks below.

Virtual Reality (VR) is effective because it enables (1) _____. It also changes the educational process to benefit both students and teachers. Some advantages of incorporating VR into education include:

Increased Engagement: VR technology creates an immersive learning setting (2) _____ and boosts their involvement. By engaging students in simulated environments, they can experience concepts more clearly, making learning more captivating and memorable.

Enhanced Memory: Studies indicate that VR can enhance students' ability to retain and recall information. Through interactive experiences, students engage with concepts more effectively compared to traditional teaching methods, (3) _____ improved memory.

Promotes Collaboration: With VR, students can collaborate in a virtual space to solve problems, explore ideas, and foster teamwork. This encourages (4) _____ and cooperation among students.

Safe Exploration: VR enables students to experiment and explore in a risk-free environment. They can study dangerous settings, conduct science experiments, or practice complex procedures without any physical dangers.

Access to Diverse Experiences: VR provides access to experiences and environments (5) _____ in real life. Whether it's exploring different cultures, simulating space travel, or running into extreme weather conditions, VR opens doors to various learning opportunities.

1. A. students learn through practical experience
 B. practical experience for students to learn
 C. students to learn through practical experience
 D. to learn through students' practical experience
2. A. that captures students' interest

UNIT 8 – WILDLIFE CONSERVATION

Task 1. Read the passage and decide whether the following statements are True (T), False (F) or Not given (NG).

A global coalition of more than 50 countries have this week committed to protect over 30% of the planet's lands and seas by the end of this decade. Their reasoning is clear: we need greater protection for nature, to prevent further extinctions and protect the life-sustaining ecosystems crucial to human survival. The globally recognised tool to safeguard marine biodiversity is to designate a "marine protected area".

The level of protection these areas provide depends on the activities permitted in their boundaries. For example, in "fully" protected areas, no plants or animals can be removed or harmed. Meanwhile, "partially" protected areas allow various extractive activities to occur, such as fishing and sometimes even mining.

Australia prides itself on having one of the largest marine protected area networks in the world, which includes iconic locations such as the Great Barrier Reef, Jervis Bay in New South Wales, and Rottnest Island in Western Australia. But only one quarter of this network is fully protected. The remaining three quarters are only partially protected, with vast areas allowing fishing, aquaculture and mining exploration. This is despite industrial-scale extraction of resources going against international guidelines for protected areas.

The majority of Australia's marine protected area network allows for commercial fishing, but few participants in our study were aware of this. Fewer still were aware large areas permit destructive activities, such as bottom fishing, which can destroy the seabed and the coral reefs ecosystem.

There are costs associated with partially protected areas - they consume conservation resources that could otherwise be utilised for more effective protection. In fact, research from 2011 found areas with a mixture of partial and full protection are up to twice as expensive to manage than a simpler fully protected area.

Given the uncertainty surrounding the effectiveness of partially protected areas globally, at a time when we face increasing challenges from climate change and loss of biodiversity, the findings of our two recent Australian studies indicate we should be aiming for more fully protected areas, not less.

Adapted from <https://theconversation.com/75-of-australias-marine-protected-areas-are-given-only-partial-protection-heres-why-thats-a-problem-149452>

_____ 1. Over 50 countries have committed to protect over 30% of the planet's seas by the end of this decade.

_____ 2. 'A marine protected area' is considered the most effective tool for preserving marine biodiversity.

- _____ 3. Partially protected areas allow extractive activities to occur while fully protected ones prohibit any harm to plants or animals.
- _____ 4. 75 % of Australia's marine protected area network is fully protected.
- _____ 5. Fishing and mining exploration in Australia's marine protected areas are permitted according to international guidelines.
- _____ 6. Commercial fishing is a prohibited activity in most Australia's marine protected areas.
- _____ 7. Bottom fishing is a destructive activity to the seabed and the coral reefs ecosystem.
- _____ 8. Partially protected areas are less cost-effective to manage compared to fully protected areas.
- _____ 9. Climate change and loss of biodiversity have negative effects on fully protected areas.
- _____ 10. We should target fully protected areas instead of partially protected areas.

- D. in which they ignored and tasks are not completed as planned

Read the following passage and mark the letter A, B, C, D on your answer sheet to indicate the best answer to each of the following questions from 19 to 28.

In today's fast-moving world, technology is changing the way we handle crime, and Artificial Intelligence (AI) is at the heart of this transformation. AI is not just about robots or science fiction - **it** is a powerful tool that helps law enforcement work smarter and faster. From spotting unusual behavior to tracking cybercriminals, AI is proving to be a game-changer in keeping communities safe.

[I] One area where AI shines is surveillance. AI-powered cameras can watch busy streets or public areas and quickly detect something unusual—like someone leaving a bag behind or lingering in one spot for too long. [II] These cameras don't just watch; they act. AI systems can instantly send alerts to the police, helping them respond quickly. Facial recognition technology is another important tool. It allows AI to match faces in real time with criminal databases, making it easier to track suspects. [III] AI is even being used to monitor large events, such as concerts or sports matches, to ensure everything stays under control. [IV]

But AI isn't just limited to physical spaces—it also plays a major role in cybersecurity. With more of our lives online, hacking and data theft are growing threats. AI can act like a **digital guard**, constantly monitoring systems to detect and stop cyberattacks. If someone tries to break into a company's network, AI can spot the activity and block it before damage is done. This makes it a key player in protecting personal and financial information.

Interestingly, AI is now even being used to monitor social media. By scanning for keywords related to crime, violence, or threats, AI can help authorities identify potential dangers before they happen. For example, planned attacks or harmful activities can be spotted early, allowing police to act quickly and prevent harm.

Of course, AI is not perfect. It raises some serious concerns about privacy. People worry that AI-powered systems could misuse personal data or wrongly identify someone as a suspect. These mistakes can have serious consequences. **That's why it's so important for governments and tech companies to use AI responsibly and ensure people's rights are protected.**

In the end, AI is an **incredible** tool that's making the fight against crime more effective than ever before. From city streets to cyberspace, it helps law enforcement keep us safe. Like all technology, it comes with challenges, but with careful use, AI has the power to create safer communities for everyone.

Question 19: Where in paragraph 2 does the following sentence best fit?

This quick response can stop crimes before they escalate into something more serious.

- A. [I]
- B. [II]
- C. [III]
- D. [IV]

Question 20: The word **it** in paragraph 1 refers to _____.

- A. world
- B. AI
- C. crime
- D. way

Question 21: Which statement best summarizes paragraph 2?

- A. AI is only useful for monitoring small-scale events.
- B. AI systems replace all human surveillance efforts.
- C. AI uses cameras and databases to ensure public safety.
- D. AI cannot recognize behavior patterns in public places.

Question 22: The phrase **digital guard** in paragraph 3 most likely means _____.

- A. an online security system
- B. a physical security guard who works with AI
- C. someone who fixes computers
- D. a program that locks data permanently

Question 23: Which of the following is NOT mentioned as a feature of AI in paragraph 4?

- A. Spotting planned attacks
- B. Scanning keywords for threats

- C. Monitoring harmful activities
- D. Identifying locations of criminals

Question 24: Which statement best paraphrases the underlined sentence in paragraph 5?

- A. Governments should stop using AI entirely to ensure privacy.
- B. AI must be used carefully to avoid harming people's rights.
- C. AI tools can protect rights without needing strict rules.
- D. Tech companies alone are responsible for AI safety.

Question 25: The word **incredible** in the last paragraph is OPPOSITE in meaning to _____.

- A. amazing B. ordinary C. outstanding D. impressive

Question 26: Which of the following is TRUE according to the passage?

- A. AI can predict almost all types of cyber crimes.
- B. AI helps authorities detect threats on social media.
- C. AI has completely solved data privacy concerns.
- D. AI-powered cameras can stop all crimes in public places.

Question 27: Which of the following can be inferred from the passage?

- A. AI will replace human law enforcement entirely.
- B. AI has no role in preventing cybercrimes.
- C. AI helps law enforcement respond more efficiently.
- D. AI only benefits large cities.

Question 28: Which statement best summarizes the whole passage?

- A. AI helps prevent crimes but raises privacy concerns.
- B. AI is only effective in tracking cybercrimes.
- C. AI cannot be trusted in solving real-world crimes.
- D. AI-powered tools replace human police entirely.

Read the passage and decide whether the following statements are True (T), False (F) or Not given (NG).

EDUCATION IN THE FUTURE

Education is another area of social life in which information technology is changing the way we communicate. Today's college students may not simply sit in a lecture or a library to learn about their field. Through their computers and the wonders of virtual reality they can participate in lifelike simulated experiences. Consider the following scenario of the future of education made possible through developments in information technology. For children over the age of 10, daily attendance at schools is not compulsory. Some of the older children attend school only once or twice weekly to get tutorial support or instruction from a teacher. For the most part, pupils are encouraged to work online from home. Students must complete a minimum number of study hours per year; however, they may make up these hours by studying at home at times that suit their family schedule. They can log on early or late in the day and even join live classes in other countries. In order to ensure that each student is learning adequately, computer software will automatically monitor the number of hours a week each student studies on-line as well as that students' learning materials and assessment activities. Reports will be available for parents and teachers. The software can then identify the best learning activities and condition for each individual student and generate similar activities. It can also identify areas of weak achievement and produce special programs adjusted to the students' needs.

- 29. College students today only study in libraries or traditional classrooms.
A. TRUE B. FALSE C. NOT GIVEN
- 30. Virtual reality technology allows students to take part in lifelike simulated experiences.
A. TRUE B. FALSE C. NOT GIVEN
- 31. Children over 10 years old must attend school every day.
A. TRUE B. FALSE C. NOT GIVEN
- 32. Students can choose any subject they want to study without restrictions.
A. TRUE B. FALSE C. NOT GIVEN

Complete each sentence using the correct form of the word in brackets.
