Ever since it was first possible to make a real robot, people have been hoping for the invention of a machine that would do all the necessary jobs around the house. If boring and repetitive factory work could be (1) _____ by robots, why not boring and repetitive household chores too? For a long time the only people who really gave the problem their attention were amateur inventors. And they came up against a major difficulty. That is, housework is actually very complex. It has never been one job; it has always been many. A factor robot (2) _____ one task endlessly until it is reprogrammed to do something else. It doesn't run the whole factory. A housework robot on the other hand, has to do several different (3) _____ of cleaning and carrying jobs and also has to cope (4) _____ all the different shapes and positions of rooms, furniture, ornaments, cats and dogs. (5) _____, there have been some developments recently. Sensors are available to help the robot locate objects and avoid obstacles. We have the technology to produce the hardware. All that is missing is the software- the programs that will operate the machine.

The invention of the mobile phone has undoubtedly revolutionized the way people communicate and influenced every aspect of our lives. The issue is whether this technological innovation has done more harm than good.

In order to (1)_____ the question, we must first turn to the type of consumer. Presumably, most parents buy mobile phones for their teenagers to track their whereabouts and ensure their safety. We can also assume that most teenagers want mobile phones to avoid missing out (2)_____ social contact. In this context, the advantages are clear. However, we cannot deny the fact that text messages have been used by bullies to intimidate fellow students. There is also (3)_____ evidence that texting has affected literacy skills.

The ubiquitous use of the mobile phone has, (4)_____ question, affected adult consumers, too. What employee, on the way home from work, would be reluctant to answer a call from their boss? Apparently, only 18% of us, according to a recent survey, are willing to switch off our mobile phones once we've left the office.

Admittedly, mobile phones can be intrusive but there are obvious benefits to possessing one. Personally speaking, they are invaluable when it comes to making social or business arrangements at short notice.(5)_____. a recent survey, they also provide their owners with a sense of security in emergency situations.

In conclusion, mobile phones do have their drawbacks, but these are outweighed by the benefits. I would argue that it is not the tool that chooses its purpose, but the user.

Telecommuting is some form of computer communication between employees' homes and offices. For employees whose job involve sitting at a terminal or word processor entering data or typing reports, the location of the computer is **of no consequence**. If the machine can communicate over telephone lines, when the work is completed, employees can dial the office computer and transmit the material to their employers. A recent survey in USA Today estimates that there are approximately 8,7 million telecommuters. But although the numbers are rising annually, the trend does not appear to be as significant as predicted when Business Week published "The Portable Executive" as its cover story a few years ago. Why hasn't telecommuting become more popular? Clearly, change simply takes time. But in addition, there has been active resistance on the part of many managers. These executives claim that supervising the telecommuters in a large work force scattered across the country would be too difficult, or, at least, systems for managing **them** are not yet developed, thereby complicating the manager's responsibilities.

It is also true that employees who are given the option of telecommuting are **reluctant** to accept the opportunity. Most people feel that they need regular interaction with a group, and many are concerned that they will not have the same consideration for advancement if they are not more visible in the office setting. Some people feel that even when a space in their homes is set aside as a work area, they never really get away from the office.

1. With which of the following topics is the passage primarily concerned?

- | | |
|------------------------------------|----------------------------------|
| A. An overview of telecommuting | B. The failure of telecommuting |
| C. The advantages of telecommuting | D. A definition of telecommuting |

2. How many Americans are involved in telecommuting?

- | | |
|---|------------------------|
| A. More than predicted in Business Week | B. More than 8 million |
|---|------------------------|

- C. Fewer than last year
Today
- D. Fewer than estimated in USA
3. The author mentions all of the following as concerns of telecommuting EXCEPT _____.
A. the opportunities for advancement
B. the different system of supervision
C. the lack of interaction with a group
D. the work place is in the home
4. The word “them” in the second paragraph refers to _____.
A. telecommuters
B. systems
C. executives
D. responsibilities
5. The word “reluctant” in line 13 can best be replaced by _____.
A. opposite
B. willing
C. hesitant
D. typical

Reading 4

Millions of people are using cellphones today. In many places, it is actually considered unusual not to use one. In many countries, cellphones are very popular with young people. They find that the phones are more than a means of communication - having a mobile phone shows that they are cool and connected.

The explosion in mobile phone use around the world has made some health professionals worried. Some doctors are concerned that in the future many people may suffer health problems from the use of mobile phones. In England, there has been a serious debate about this issue. Mobile phone companies are worried about the negative publicity of such ideas. **They** say that there is no proof that mobile phones are bad for your health.

On the other hand, medical studies have shown changes in the brain cells of some people who use mobile phones. Signs of change in the tissues of the brain and head can be detected with modern scanning equipment. In one case, a traveling salesman had to retire at young age because of serious memory loss. He couldn't remember even simple tasks. He would often forget the name of his own son. This man used to talk on his mobile phone for about six hours a day, every day of his working week, for a couple of years. His family doctor blamed his mobile phone use, but his employer's doctor didn't agree.

What is it that makes mobile phones **potentially** harmful? The answer is radiation. High-tech machines can detect very small amounts of radiation from mobile phones. Mobile phone companies agree that there is some radiation, but they say the amount is too small to worry about.

As the discussion about their safety continues, it appears that it's best to use mobile phones less often. Use your regular phone if you want to talk for a long time. Use your mobile phone only when you really need it. Mobile phones can be very useful and convenient, especially in emergencies. In the future, mobile phones may have a warning label that says they are bad for your health. So for now, it's wise not to use your mobile phone too often.

1. The word “they” in paragraph 2 refers to _____.
A. doctors
B. ideas
C. professionals
D. companies
2. According to the passage, cellphones are very popular with young people because _____.
A. they make them look more stylish
