Read the following passage about The Death of Gender Stereotypes and mark the letter A, B, C or D on your answer sheet to indicate the best answer to each of the following questions from 21 to 28.

Climate change is one of the biggest challenges facing our world today. Every day, the choices we make can either help or harm the environment. While some people think individual actions don't matter much, scientists say that when millions of people change their habits, it can make a real difference in protecting our planet. Small changes in daily routines can add up to significant benefits over time.

Transportation is an important area where we can reduce our impact on the environment. Many people are now choosing to walk, ride bicycles, or take public transport instead of driving cars. This helps decrease the amount of harmful gases released into the air. Some families are switching to electric vehicles, which are better for the environment than gasoline cars. Carpooling also reduces traffic and saves fuel.

Our food choices also affect the climate significantly. Eating less meat and more plant-based foods can help reduce greenhouse gas emissions. Growing vegetables and fruits requires less energy and produces fewer emissions than raising cattle. Additionally, buying local food products means less transportation is needed to get food to our tables, which helps reduce pollution. Many people are also choosing to grow **their** own vegetables, which reduces transportation needs.

Saving energy at home is another way to protect the environment. Simple actions like turning off lights when leaving a room, using energy-efficient appliances, and adjusting the thermostat can reduce our energy consumption. Many people are also installing solar panels on their roofs to generate clean electricity. These individual choices, when combined with others' efforts, create a positive impact on our planet's future.
